

## Grove: The two-engine solution to high fuel prices

Lower your operating costs with our new Grove TM500E-2 truck crane, the perfect combination of productivity and fuel efficiency. The TM500E-2 has one engine for transport and another for the crane functions, so you'll use less fuel per hour — and with a 45 USt capacity and a 110-ft tip height, you'll get a lot more work done in the process.
